What is CSS?

CSS is the language we use to style a Web page.

CSS stands for Cascading Style Sheets

CSS describes how HTML elements are to be displayed on screen, paper, or in other media

CSS saves a lot of work. It can control the layout of multiple web pages all at once

External stylesheets are stored in CSS files

Difference between HTML and CSS

HTML & CSS Overview

HTML (Markup Language) and CSS (Cascading Style Sheets) are the foundational technologies for creating web pages. HTML provides the structure, while CSS defines the style and layout. HTML is used along with CSS and JavaScript to design web pages.

HTML (Markup Language)

HTML is the standard markup language used to create web pages. It structures content using elements such as headings, paragraphs, lists, links, images, and more. HTML elements represent the building blocks of web pages, allowing developers to embed multimedia, create

Features of HTML

Structure:

HTML provides the basic structure of a webpage, defining the layout and hierarchy of content using elements such as headings, paragraphs, and lists.

Content:

HTML is used to add various types of content to a webpage, including text, images, videos, and audio files.

Links:

HTML is used to create links between different pages and websites, allowing users to navigate and move across the web.

HTML vs CSS Comparison

Key Differences between HTML and CSS

HTML	CSS
HTML is a markup language used to define the structure of a web page.	CSS is a style sheet language used to style web pages using different styling features.
It consists of tags inside which text is enclosed.	It consists of selectors and declaration blocks.
HTML doesn't have further types.	CSS can be internal, external, or inline depending upon requirements.
We cannot use HTML inside a CSS sheet.	We can use CSS inside an HTML document.
HTML is not used for presentation and visualization.	CSS is used for presentation and visualization.
HTML has comparatively less backup and support.	CSS has comparatively higher backup and support.
HTML doesn't allow animations and transitions.	CSS allows animations and transitions to improve the UI.
HTML files are saved with .htm or .html extension.	CSS files are saved with .css extension.

Conclusion:

In conclusion, CSS is no longer merely a tool for adding colors and aesthetics to web pages; rather, it has become the fundamental pillar for creating a seamless, interactive, and responsive user experience across various devices and systems. While HTML provides the structural baseline for a webpage, CSS brings it to life by giving it shape and a distinct identity. As web technologies continue to evolve, mastering CSS remains an indispensable skill for any developer or designer aspiring to build modern, visually engaging digital environments.
